

## assignment\_category\_02

### Dear Candidates,

Great news! You've made it through our first selection round. We were impressed by your application and skills. You're now invited to the next stage of our selection process. This upcoming project is your chance to show us what you can do. We want to see how you:

- Tackle challenges
- Use your creativity
- Solve problems
- Deliver top-quality work

We're looking forward to seeing your unique talents in action, and this is an exciting opportunity to demonstrate your potential.

---

## Service sharing Web Application

### Project Overview and Discussion

This project aims to develop a **service-sharing web application** where users can perform various actions such as adding, updating, and deleting their own services, browsing services shared by others, booking services, and managing the statuses of booked services. The platform focuses on providing a user-friendly experience with features for service management, service booking, and status updates.

### Let's understand the website theme

You have to create a **simple service-sharing web application**. Where users can add , update and delete his own services , watch others' services , watch service details, book any specific service , and update the current status of his service .

### Possible Pages and Routes

1. **Login:** Simple Login system with a form and social login (google only )
2. **Registration:** Simple Registration system with a form & social login (google only).
3. **Home:.** This will be the main landing page and by clicking logo and Home you have to take users to this page.

4. **All Services:** This public Route will show all the services from your system service collection
5. **Single Services:** For specific service , It will show the service details with a book now button. Where users can book specific services. .
6. **Add-A-Service Page:** Users will successfully add service to the system from this page
7. **Manage-Services Page:** This Private Route will show all the services he has added in the system with 2 actionable buttons [ update and delete ] . he can update or delete his service from this route.
8. **Booked Service:** This Private Route will show the services you have booked from the system and current status of the services.
9. **Service To Do:** This Private Route will show all your services booked by other users. User can update the status of booked services with a dropdown. Status are
  - pending( default value )
  - working
  - completed

For This Assessment please do not add any validation for booking his own service. It will help us to check the assignment properly. After getting the result you can work on it.

## Service Ideas

We are giving you some ideas. Choose any one from them.

Consultation Services, Home Repair Services, Lawyers services, Electronic Item Repairing Services, Spiritual activity services (milad, khatna, puja , Bibaho), Educational Services, Beauty and Grooming Services , etc.

Get some inspiration from

[Sheba.xyz](#) , [One Stop Renovation Service](#) , [Expert Home Repairs, Cleaning Services, Beauty Services, in Chennai](#)

---

## Ensure the Following things to get 100% mark

- Include a minimum of 18 notable GitHub commits on the client side
- Include a minimum of 8 notable GitHub commits on the server side
- Add a meaningful readme.md file with the name of your website and a live site URL. Include a minimum of five bullet points to feature your website. Write your selected category's name here.
- Make it responsive for all devices. You need to make it responsive for mobile, tablet and desktop views.
- After reloading the page of a private route, the user should not be redirected to the login page.
- Use the Environment variable to hide the Firebase config keys and MongoDB credentials.
- Don't use any Lorem ipsum text; you can not use the default alert to show any error or success message.

## Deployment Guideline

If your Deployment is not okay you will get 0 and may miss the chance of our upcoming rewards.

- Ensure that your server is working perfectly on production and not throwing any **CORS / 404 / 504** Errors.
  - Ensure that your Live Link is working perfectly and that it is not showing errors on Landing in your system.
  - ⚠️ ensure that the page doesn't throw any error on reloading from any routes.
  - ⚠️ Add your domain for authorization to Firebase if you use **Netlify / surge**
  - ⚠️ Logged in User must not redirect to Login on reloading any private route
-

## Requirements

### 1. Layout

Header
Dynamic sections based on Routes
Footer

- Create A Beautiful Header with a Navbar. Follow [2nd section](#) for more details about navbar.

- Create a meaningful footer. (including website logo+name, copyright information , social media links (facebook and Linked-In)

- create a 404 Error-Page also. It will show for invalid routes or errors with a button. By clicking the button it will take the user to the homepage.

### 2. Navbar Design

Your website should have a navbar with the Website name+logo, You have to do some conditional rendering on navigation. Please follow the below requirement.

Every non-logged user will show following nav menu

Home	Services	Log-in
------	----------	--------

Every logged in user will show following Nav Menu

Home	Services	Dashboard	Logout Button with user Image/Name
------	----------	-----------	------------------------------------

**The Dashboard is a dropdown menu.** On Clicking dashboard user will show following Routes

- Add Service

- Manage Service
- Booked-Services
- Service-To-Do

### 3. Login & Registration systems

On the Registration and Login pages, display relevant error messages when necessary.

**Login Page:** When a user clicks on the login button, they will be redirected to the login page having the following:

- Email/Password Based Login
- Google Sign-in
- A link that will redirect to the registration page

**Registration Page:** The Registration page will have the Email / Password form having the following fields:

- Name
- Email
- Password
- Photo URL

**Note:** Do not enforce the email verification method and forget & reset password method, as it will inconvenience the examiner. If you want, you can add after receiving the assignment result.

### 4. Add a Services (PRIVATE)

Create an Add Product page where there will be a form having the following fields:

- Image URL of the Service
- Service Name,
- Price,
- Service Area,
- Description
- Add button

**The person adding the service is a service Provider .** You have to store service provider information with the service information such as Service provider image , Service provider name, Service provider email will be taken from firebase . On clicking the add service button service information will be added in the database.

## 5. Home page

**Banner/Slider:** Add a beautiful banner/ slider . Try to make it catchy and impressive.

**Popular Services :** On this section, you will have to show maximum 6 service-card with one-column layout or 2 column layout having

the following information:

- Service Image
- Service Name
- Service Description ( max 100 charecter)
- View Detail Button
- Service Provider Image & Name
- Service Price

The section will have a Show All button that will redirect you to the all services page.

**Extra Section:** Add minimum 2 relevant and unique extra sections in the homepage in addition to the Featured Section. Try to make them attractive.

**Animation:** Add some animation in the whole landing page using framer-motion / data-aos on Homepage.

**Note:** *When a user is not logged in and if he/ she clicks on the View Details button, redirect him/ her to the login page. Without a login, you can not visit the single service details page.*

## 6. All Services Page

### Services Section:

You have to show all the services in this section.

**All available services:** Services added by the admin or other users should appear here.

On this page, you will have to show all services with one-column layout having the following information:

- Service Image
- Service Name
- Service Description ( max 100 character)
- View Detail Button
- Service Provider Image , Name
- Service Area
- Service Price

## 7. Single Service details ( PRIVATE )

After clicking on the View Details button, he/ she will be redirected to the Service Details route ( /services/:id ) containing the information

### Service Provider Information:

- Service Provider Name
- Service Provider Image
- Service Location/Area [DHAKA, COMILLA etc]

### Single Service Section:

- Service Image
- Service Name
- Service Description
- Service Provider Image & Name
- Service Price

- Book Now Button
- On clicking the book now button, a modal will open with the following input fields or take the user to another route which will have a form with the following input field.
  - ServiceId (Not editable)
  - Service Name ( Not editable )
  - Service Image ( Not editable )
  - Provider email ( Not editable )
  - Provider Name (Not editable )
  - Current User email ( Not editable )
  - Current User Name( Not editable)
  - **Service Taking Date (editable)**
  - **Special instruction (editable)**  
// anything like address , area, customized service plan.
  - Price ( Not editable )
  - Purchase Button

On clicking the Purchase Button will add all the information with a serviceStatus (pending) into a new collection in the database.

## 8. Manage Services (PRIVATE)

This page will be private routes. If a user log in, they will access the Manage Service page,

**This page will show all the services they have added from the Add Service page.**

Each card will have an Edit and delete button.

**Update Action** - If they click the edit button, they can update the service information

**Note:** you can show the update form in a modal or another route.

**Delete Action** - If they click the delete button, the service will be removed.

Before the delete, ask for a delete confirmation.

Note: If a user logs in they will only see the services they have added. The user cannot see the services other users added.

## 9. Booked Service (PRIVATE)

The page will contain The services from the booking collection which user have booked/purchased. You have to show this in this page.

It means that show all the booked services from the booking collection where current userEmail is equal to userEmail in each document.

If there is no service , show a relevant message.

## 10. Dynamic Titling

Make your website title Dynamic . For every Route change , The Website Title will be changed based on that route.

# Challenges

## 1. Service To Do (PRIVATE)

The page will contain all the booked services information where the serviceProvider is you.That If there is no service , show a relevant message.

You have to show service status also.

There will be a dropdown button for each booked service card. The dropdown will have some options.

- pending( default value )
- working
- completed

On changing the Dropdown from a specific booking service. It will update the service status of that service from the booking collection

## 2. Search System

Create a Search System based on the service name at all service pages .

- When a user writes anything using an input field. It will show you all the services matched with the search text.
- On clicking the detail button of any service will take you to the service detail page.

For example , you may take inspiration from the facebook search system.

## 3. Theme Customization

Add a Theme Toggling Button for changing themes from light to dark / dark to light. By changing the theme, it will make the full system dark / light based on user interaction.

**4. JWT Authentication:** Upon login, you will create a JWT token and store it on the client side. You will send the token with the call and verify the user. Implementing 401 and 403 is optional. Ensure you have implemented the JWT token, create a token, and store it on the client side for both email/password-based authentication and social login. You must implement JWT on your private routes.

## What to submit:

1. Your Assignment ID/Variant
2. Your client-side code GitHub repository
3. Your server-side code GitHub repository
4. Your live website link

## Optional (But Highly Recommended):

Implement any two tasks from the following optional list:

1. Add a spinner when the data is in a loading state. You can add a gif/jpg, use any package or customize it using CSS.
2. Add one extra feature of your own. This will help you in the future to differentiate

your project from others.

4. Implement Pagination in the all services page. Show 6-9 services per page.

### Some Guidelines:

1. Do not waste much time on the website idea. Just spend 15-20 minutes deciding, find a sample website, and start working on it.

2. Do not waste much time finding the right image. You can always start with a simple idea. Make the website and then add different images.

3. Don't look at the overall task list. Just take one task at a time and do it. Once it's done, pick the next task. If you get stuck on a particular task, move on to the next Task.

4. Stay calm, think before coding, and work sequentially. You will make it.

5. Be strategic about the electricity issue.

6. use chat gpt to generate JSON data. You can use chatGPT for Other purposes as Well.
